LIGHTFASTNESS

LIGHTFASTNESS TEST CRITERIA (INDOOR DISPLAY CONDITIONS)

Light source Fluorescent light
Intensity 70k lux
Temperature 24°C
Humidity 60% RH
Glass mount 2mm, soda lime
Fade criteria Pure YMC 30% loss at OD=1
Display life calculation Total illuminance/500 lux x 10 hours x 365 days = 1 year

Tests developed and conducted by EPSON under fluorescent light (indoor display condition) with glass mount. The data is calculated by EPSON's accelerated test of prints on specialty media. See www.epson.com.au for more info.

Data is calculated using accelerated simulation of fading under indoor preservation conditions including fluorescent light indoor display. Temperature, humidity and some atmospheric gases may also affect the rate of fading. The estimated lightfastness period does not indicate the colour changing or the durability of the paper itself. EPSON recommends that your prints be stored in a photo album (or plastic photo storage box) in acid free, archival sleeves commonly available from most camera shops.
