

Control, security and efficiency

User productivity and security in one package

Epson Print Admin (EPA) is a server-based print management solution that helps organisations secure sensitive documents, reduce printing costs and improve productivity—all while remaining easy to deploy and manage.

With flexible user authentication, EPA ensures that only authorised users can print, scan or copy, while Guest Access enables visitors to use selected functions without compromising security. Seamless integration with Microsoft Active Directory, Microsoft Entra ID, Google Workspace and OpenLDAP allows users to sign in using existing credentials, minimising IT effort and accelerating adoption.

EPA's built-in monitoring and reporting tools provide complete visibility into print usage, enabling organisations to control costs, improve efficiency and support sustainability initiatives, especially when paired with Epson WorkForce Pro or Enterprise inkjet devices.

Evaluate freely

Enjoy a 90-day trial of EPA, available for use on up to two devices. This trial period gives you time to fully evaluate the solution before making a purchase. If you require EPA on additional devices, licenses can be purchased through EPA's simple and easy-to-implement licensing model.

Please contact Epson for more information.

Administrate easily

Epson Print Admin's intuitive, web-based interface delivers advanced print, copy and scan control through a single, easy-to-use platform. Designed for simplicity and efficiency, it allows organisations to quickly manage and optimise their print fleet, reducing administrative effort while improving productivity.

Integrate with ease

Epson Print Admin integrates seamlessly with a wide range of directory services, simplifying setup and streamlining user management. With support for Microsoft Active Directory, Microsoft Entra ID and Entra Domain Services, Google Workspace, Google Secure LDAP and OpenLDAP, organisations can enable users to sign in securely using their existing work credentials, reducing administrative overhead and accelerating deployment.

Secure device use

EPA supports guest access, allowing unauthenticated users to use selected device functions without needing a login while still maintaining security controls.

Enhance productivity

EPA offers advanced workflows designed to save time and reduce manual work, including:

- Print and scan directly to your favourite cloud services, including SharePoint Online, OneDrive, Microsoft Teams and Google Drive
- Additional scan formats, including BMP and PNG
- Advanced scan workflows such as job splitting
- Automatic blank page removal
- Scan directly to on-premises SharePoint Server

Reduce waste

Documents are only printed once the user releases the job at a compatible device. This eliminates the most common cause of print waste – forgetfulness – while simultaneously enhancing security.

Educate employees

Notifications can be set up to educate users about responsible printing. That way, you can discourage users from unnecessary or wasteful full-colour printing at the point of print job creation.

Control and monitor costs

With built-in cost-saving rules that can be activated in seconds and the ability to create rules specific to your print environment, Epson Print Admin puts you in control. You can even create customised reports to conduct specific analysis or choose from a wide range of reporting methods to best display your data.

EPSON OPEN PLATFORM

Epson Print Admin works in conjunction with Epson Open Platform (EOP) – software which allows you to adapt our business inkjets and multifunction devices to suit your needs.

EPA-supported hardware

Product category	Model name
Office printing	WorkForce Enterprise AM-C4000, C5000, C6000, M5500
	WorkForce Enterprise WF-C20600, C20750, C21000, M21000
	WorkForce Pro EM-C8100, EM-C8101
	WorkForce Enterprise AM-C400, C550, C550Z
	WorkForce Pro EM-C800, EP-C800
	WorkForce Pro WF-C5390, C5890, M5399, M5899
Large format printing	SC-T5760D Series
	SC-T7760D Series
Scanners	WorkForce DS- 900WN

System requirements

CPU: 2.0 GHz or faster processor

Hard disk free space: 50 GB or more (except for database capacity)

Display: 1024 x 768 or higher

4 GB RAM minimum required

Notes

1. Make sure the system configuration matches the current environment, such as network communication speed, number of multi-function devices and number of users.
2. You cannot install this system on a server being used for domain control.
3. The system does not support a multi-homed computer environment.
