Best Printing Technology

Epson UltraChrome K3™

The Epson UltraChrome K3 ink technology is a breakthrough in professional printing. It incorporates 8 new colour pigments improving the quality and durability of both colour and black & white printing. Epson printers using the K3 system can utilise two different black ink modes – Photo Black or Matte Black, and these allow the usage of a variety of media types from colour proofing stock to fine art textures. The Epson UltraChrome K3 Ink is a resin-coated pigment ink that achieves a high level of longevity and durability, and the characteristics reduce metamerism effects. To support these impressive inksets, Epson offers a full range of UltraChrome K3 Printers from 13 inch to 44 inch printing width.
